

4 SIMPLE STEPS TO USE FEED4PROFIT

The bigger picture – going beyond feed formulation to maximize profit/pig.

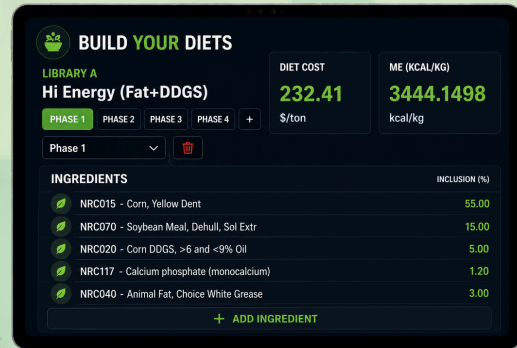

1 SET PREFERENCES

- Select the wanted scenario
- Scenario selection auto-loads Libraries A & B
- Select a target month/year (This will control the baseline commodity prices used in the session)

2 BUILD YOUR DIETS

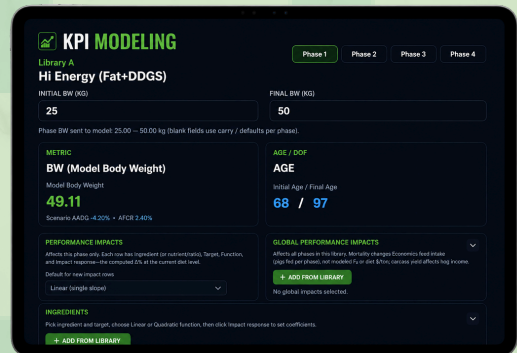

- Explore Diet Libraries (A vs B)
- Select the phase (phase 1-4)
- Adjust: » Ingredient prices (\$/ton) » Inclusion levels (min/max %) » Nutrient constraints

Feed Formulation

3 PREDICT PERFORMANCE

- Select a KPI: BW, ADG, ADFI, or FCR
- Set initial and final body weight
- Add performance impacts: ingredients, nutrients, ratios
- Use this section to test how diet changes affect growth and efficiency

Performance Modeling

4 EVALUATE ECONOMIC IMPACT

- Select the target month and year
- Review: » Income » Feed cost » IoFC (Income Over Feed Cost)

Compare programs across time instantly!

Tip: IoFC is an essential outcome for decision-making.
